

The Perforce client needs to provide the following information to be able to connect to the Perforce server.

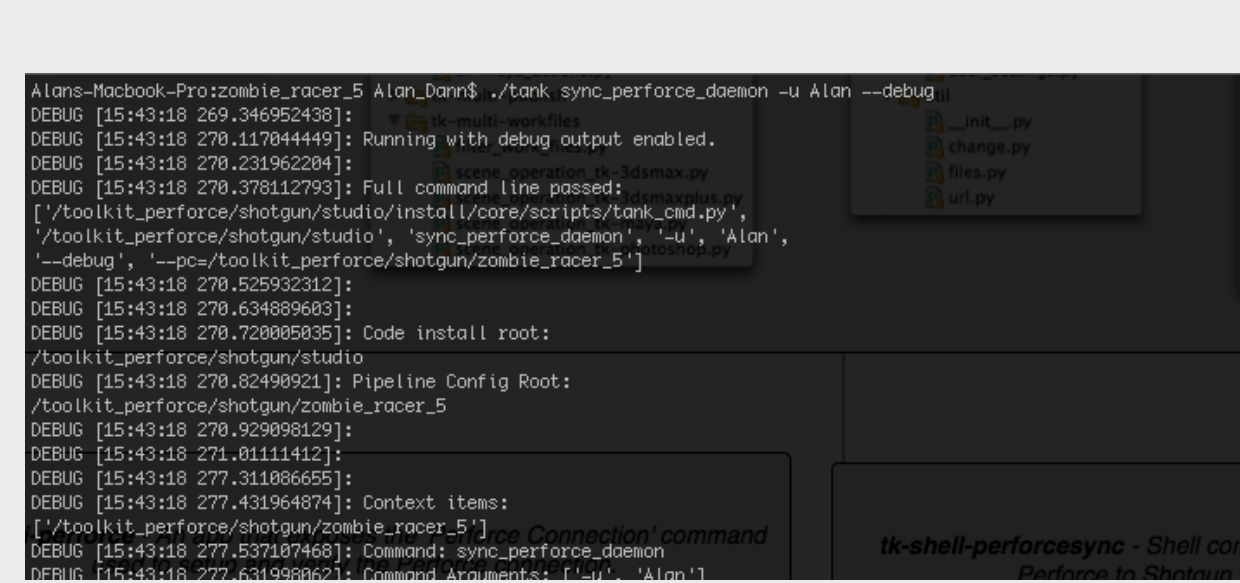

tk-framework-perforce contains the UI used by the tk-multi-perforce app, platform specific P4Python modules, hooks for both the framework and specific apps (e.g. tk-multi-workfiles, tk-multi-publish) and useful utility methods for working with P4Python.

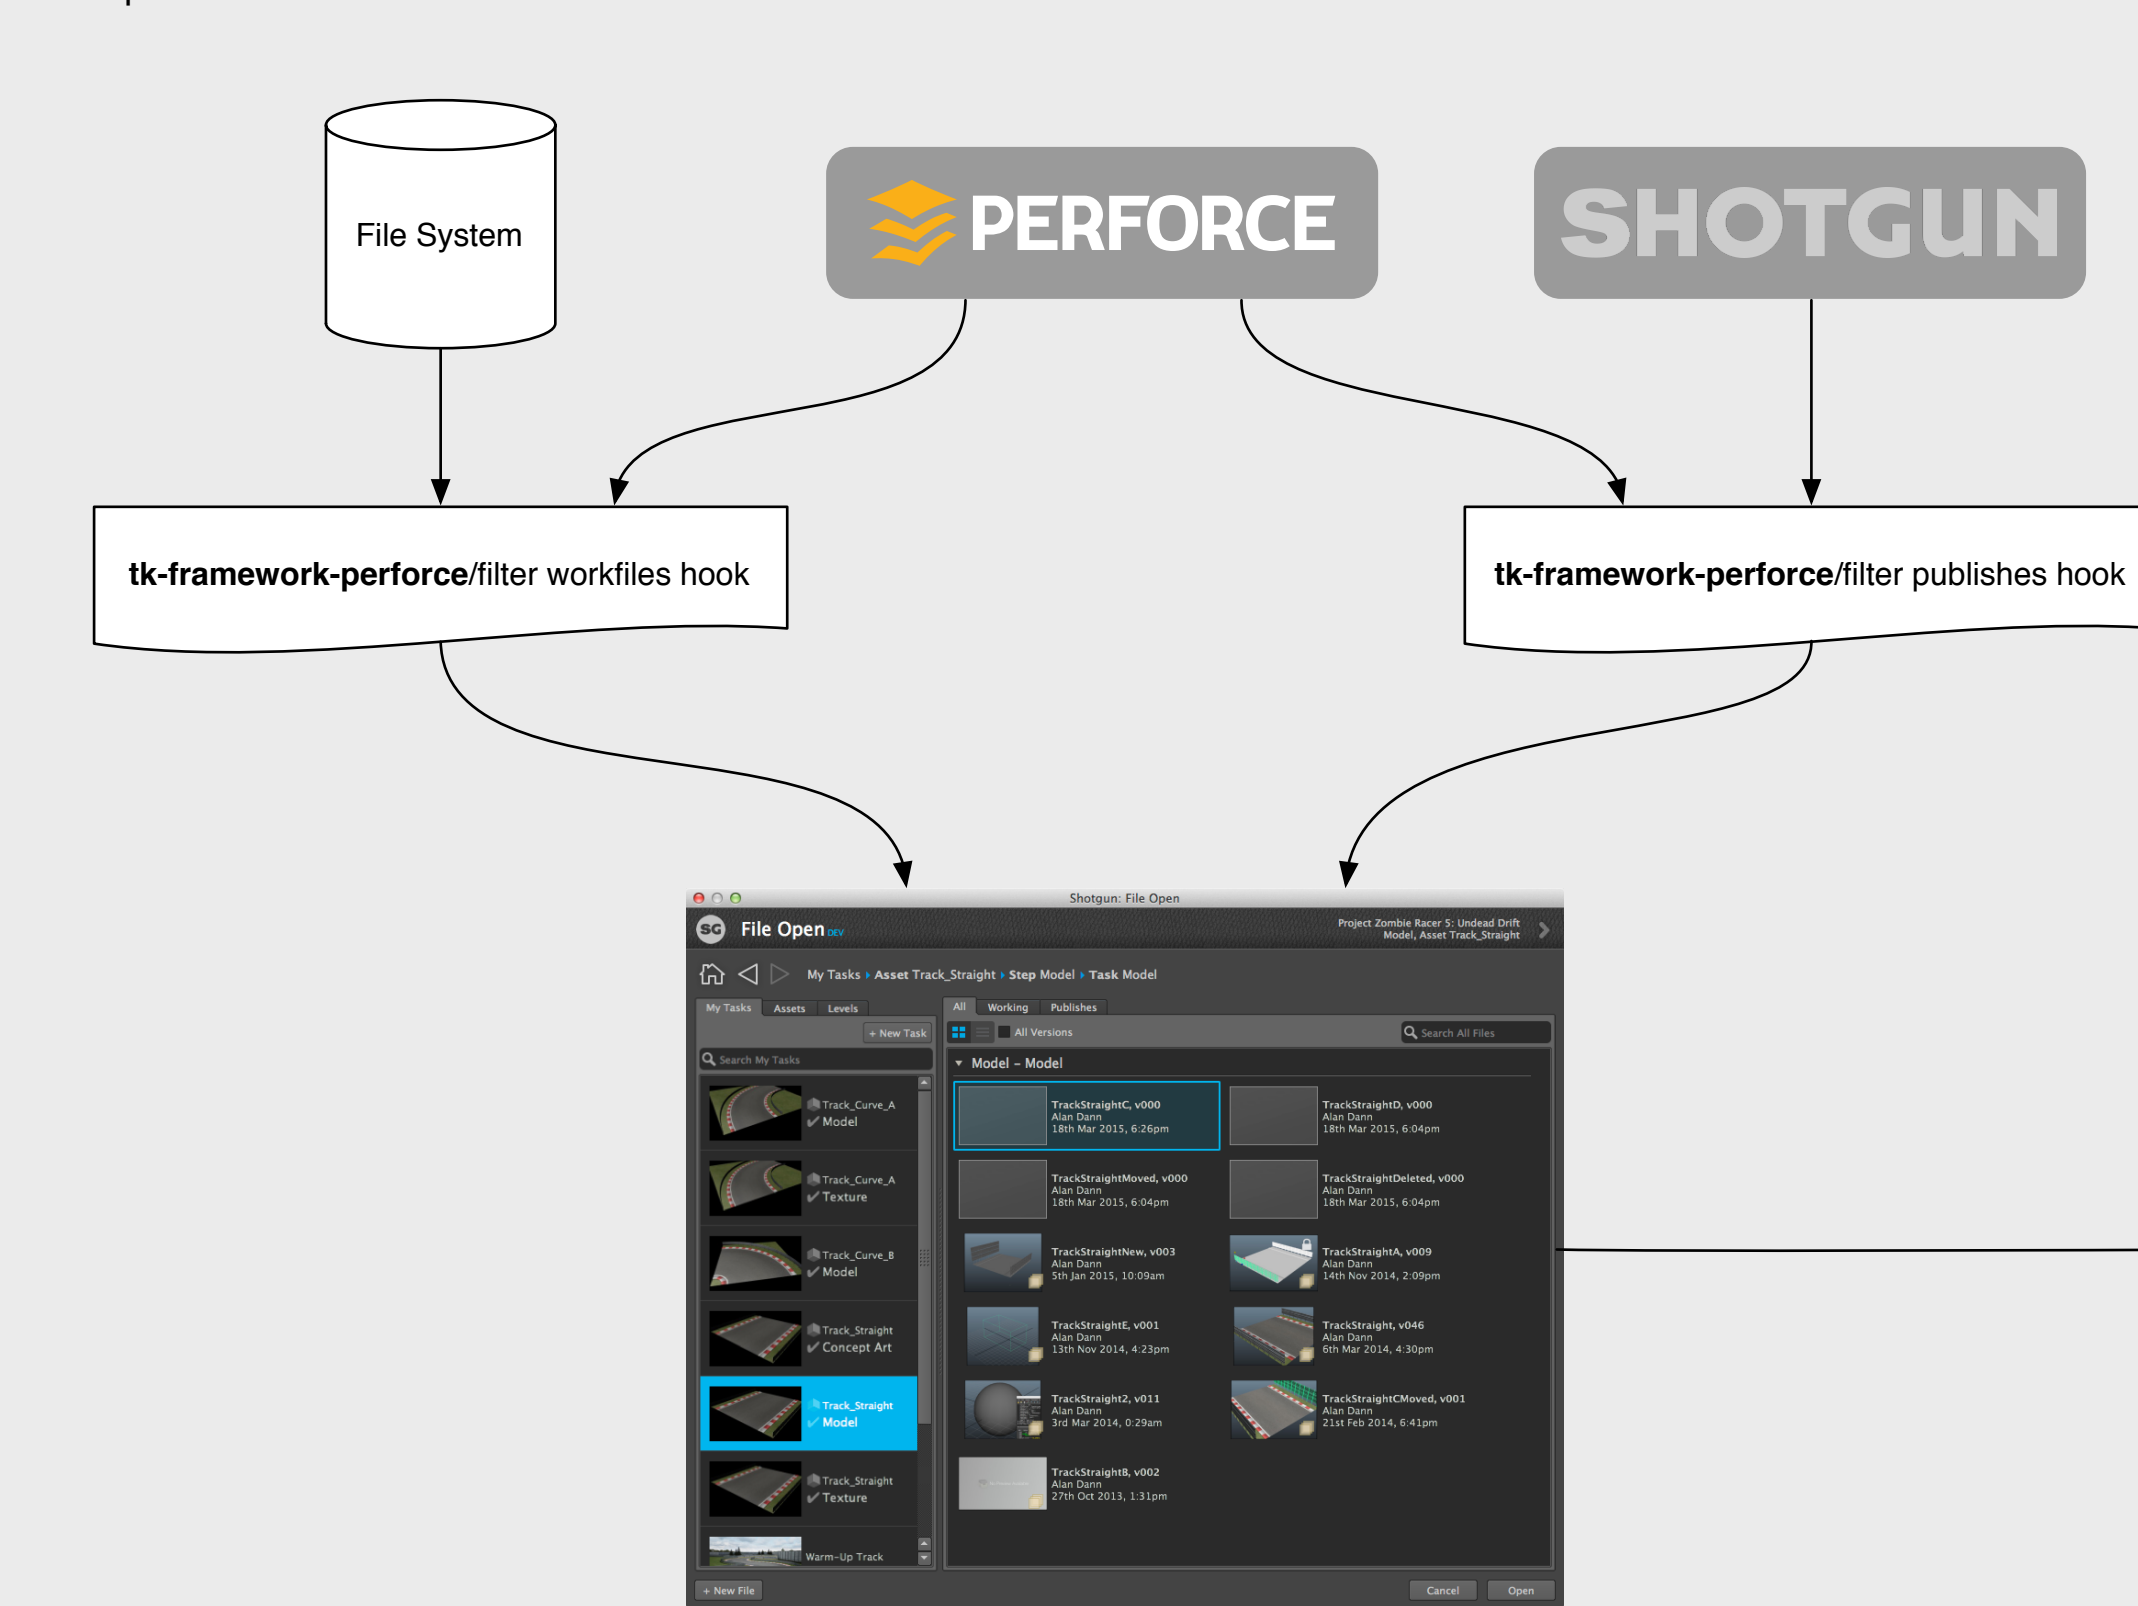

tk-multi-perforce - An app that exposes the 'Perforce Connection' command used to setup and verify the Perforce connection.

tk-shell-perforcesync - Shell command app used to sync changes from Perforce to Shotgun. Can be run as a daemon
